### **How wet is wet?**

**Infinite Water Inc.** is constantly observing every facet of the world-wide need, use and waste of water. The World Bank collects data regularly for a variety of reasons. One is basically that the health of every species on earth is dependent on the ability to have access to fresh potable water as well as water used in every commercial endeavor.

**Infinite Water Inc.** believes that there is unquestionable truth in the phrase “water is the new oil”. **Infinite Water Inc.** has the opinion that mankind, unhindered by prolonged special interest constantly pushing the need for oil, can easily produce energy by natural means. In contrast there is no substitute for water. Period.

**Infinite Water Inc.** sees an interesting portrait of oil vs. water. Egypt records the lowest average annual rainfall across all countries, at 18 mm (0.7 inches). Libya, Saudi Arabia, Qatar, UAE, Bahrain, Algeria, Mauritania, Jordan, and Kuwait follow. In fact, countries from **North Africa** and the **Middle East** make up the entirety of the driest countries in the world. In contrast, Saudi Arabia, UAE, Kuwait, Qatar, and Libya are in the top 20 counties producing oil.

**Infinite Water Inc.** sees a basic question. As of May 22, 2024, U.S. crude oil imports were at 6.663 million b/d. At the same time in 2023, the United States exported about 10.15 million b/d of petroleum to 173 countries.

**Infinite Water Inc.** thinks that perhaps instead of Petro dollars we should begin using “Water Dollars”
