Holiday, Florida, November 1, 2024

And I wonder, still I wonder, who'll stop the rain?

Infinite Water Inc. is guessing someone, or more likely 'something', has. **Infinite Water Inc.** recognizes a bone-dry October that has pushed nearly half of the United States into a flash drought, leading to fires in the Midwest and hindering shipping on the Mississippi River. **Infinite Water Inc.** monitors close to 100 different long-term weather stations in 26 states, including Alaska, which have experienced their driest October on record. That means no measurable rain for New York, Houston, Dallas, Philadelphia, San Francisco and Sioux City, Iowa, along with normal dry spots such as Los Angeles, Las Vegas and Phoenix.

Infinite Water Inc. knows what you are thinking, because we have the same thoughts. In September parts of the US were drowned with rain. An example of the dramatic level is Asheville, North Carolina. It was devastated by Hurricane Helene, and was deluged with nearly 14 inches of rain in three days of September, but has received only one one-hundredth of an inch in October. **Infinite Water Inc.** wonders if this type of wet and dry weather is going to become the norm? More importantly, if either of these patterns lasts longer than a single month, how will we all be affected? This is not just the financial cost to replace homes and businesses that are being affected. It is life on a grand scale.

Infinite Water Inc. and Infinite Complex have looked towards investment in those arenas that are focused on the worst-case scenarios of both drought and flood. **Infinite Water Inc.** seeks to supports the constant drought conditions which are currently the norm but science has suggested that the trend will be towards drier times ahead. Having developed techniques to provide water via the moisture in the atmosphere, **Infinite Water Inc.** will be able to provide the planet with water when the planet is experiencing constant drought. **Infinite Water Inc.** is also ahead of situations where too much water, and moisture-soaked land is created in a short span of time, can be mitigated via their subsidiary **TeraView Inc.** whose algorithms can precisely forecast situations where the agriculture industry, as well as any land parcel on earth, is able to prepare for floods.

When investments, such as those of **Infinite Complex.** goes beyond ROI and provides aid, everyone wins.
